

# Discussion points/decisions

2

- **Timeline/roadmap** for integration of next steps in platform (BAM slices, WGS availability in the platform, more tools for genome analysis) and for other elements of project as a whole – requested by NeurOmics
- **Implementation/timeline** of controlled access for “external users”
- Scenario for **multi-omics** development: which option to choose?
- **Coordination** of the technical integration of the different elements: uniform user interface across the front end of platform (ID-card, catalogue, genomics) and coordination of user management in the background (authentication, registrations, governance)
- **Availability** of more, new and updated tools (incl. UMD-Predictor / HSF predictions) through the RD-Connect platform
